Data Sheet : *1000mm Channel Unit*

This product is manufactured with vertical tapered slots at 400mm centres to allow liquid drainage of stored slurries. The slot starts at 250mm from the floor, allowing slurries to flow across the compound.

Fully compatible with standard retaining panels for above or below ground storage. Simple installation on plinth which forms the liquid run-off channel.

This product has no exposed steelwork, limiting corrosion.

Designed to BS5502 part 50 (1987)
