## Data Sheet: *Storage Tanks*

Designed to comply with the “Code of Good Agricultural Practice for the Protection of Water” & the Control of Pollution Regulations 1991. When fitted according to the manufacturer’s instructions they are capable of storing liquids ranging from stable water to silage effluent.

They are supplied in 2400x2400 (mm) sections, 2300mm deep modules, with a storage capacity of approx. ten cubic metres (2200 gallons), or 11000 litres per section. These tanks can be readily enlarged to form either individual storage tanks, one larger tank or a series of settlement chambers.

Covers can be provided with a range of load-bearing capacities including slatted covers, lockable manholes or simple cover slabs.

Inlets and outlets can be positioned to suit applications required.

All joint seals and coating compounds are supplied with each tank along with fitting instructions and lifting equipment

## Sizes Available

Tanks are supplied in 2400mm x 2400mm x 2300mm modules.

Storage capacity per section: 10m<sup>3</sup>
